

HB 722 – Medical Cannabis → is now **SB 145** ✓

Colin, Autism

Reid, EB

Jake, Autism

Gage, Tourette's

All SB 145 does is:

- Adds **7** new conditions to HB 1 - **autism, epidermolysis bullosa, HIV/AIDS, peripheral neuropathy, PTSD, Tourette's syndrome, and terminal illness.** (ulcerative colitis and IBS also added under Crohn's, at the request of physicians.)
- Removes the "end-stage" qualification for cancer, ALS, MS, Parkinson's, and Sickle Cell Disease, at the request of physicians.
- Removes the 1:1 THC to CBD ratio to cover the actual medicine people are using – BUT KEEPS the 5% THC limit.
- Removes the one-year residency requirement, at the request of physicians.
- Changes the reporting requirement for doctors from quarterly to annual, at the request of physicians.

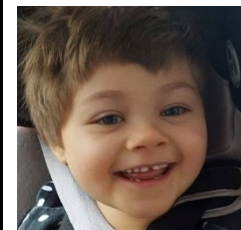

The bottom line is patients with these 7 additional conditions will be able to **work with their doctor** in using medical cannabis, just like patients covered under the original HB 1 that was passed and signed last year.

THAT IS ALL THIS BILL DOES.

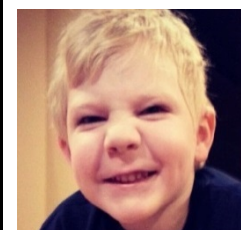

There have been no negative impacts from the implementation of HB 1.

Please don't base your decision on whether or not you believe HB 1 was all that was needed or promised. Please consider the actual bill, which is about helping these patients, who desperately **NEED THIS MEDICINE.**

PLEASE PASS SB 145
